Third Transnational Partners Meeting

Skills that empower Uganda's youth

Green jobs VET curricula

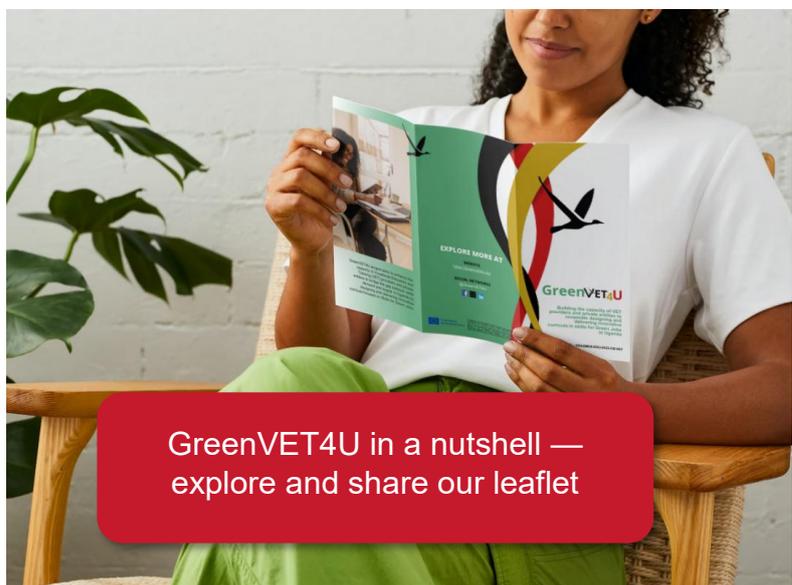

### PROJECT UPDATES

GreenVET4U project moves forward supporting green skills development in Uganda. During these past months, we have been working on the different tasks defined in the project plan. Moreover, we have had another in person meeting, this time in Spain, to share ideas and discuss implementation of next processes.

A Competences Matrix on Design and Delivery of Innovative Curricula in Skills for Green Jobs will be soon available in our website. It will serve as a framework to help VET educators develop programs tailored to the evolving green job sector. Alongside this, we will publish the Benchmarking Analysis of European Frameworks of Reference, providing a comparative study that will serve as a reference for new training approaches.

Remember to check our website and social networks to be the first to know!

## Third Transnational Partners Meeting

From April 8 to 10, partners from Uganda, Spain, Italy, and Germany came together in Valladolid (Spain) for the third transnational meeting of GreenVET4U. The agenda included a review of completed tasks, updates on ongoing work, and coordination of next steps in the project.

The meeting began with a visit to the 4th Castilla y León VET Forum, where partners attended roundtables on current challenges in vocational education. They also explored the regional Skills Competition, showcasing the impressive technical skills of over 200 VET students.

### KEY POINTS OF THE PROJECT

#### Skills that empower Uganda's youth

Uganda is one of the youngest countries in the world, yet many young people still face serious barriers to education, employment, and training. Addressing this untapped potential is essential for sustainable growth and decent work.

In this context, GreenVET4U is working to support the development of green vocational skills that empower young people and promote inclusive, sustainable employment. Discover how the project aligns with Uganda's Vision 2040 and the SDGs to support a greener and more equitable future.

## Green jobs VET curricula

As economies shift towards sustainability, the demand for green jobs is rising—and VET systems must adapt. Preparing learners for this transition means going beyond technical skills to embed environmental awareness, innovation, and adaptability into training programmes.

In our website article, we explore eight key strategies for developing forward-looking curricula: from integrating green skills across disciplines and promoting work-based learning, to using digital tools and aligning with European and international standards.
